Continuation She t (PTO-303) 10/036,303

Continuation of 5. does NOT place the application in condition for allowance because: there are many inherent elements in a semiconductor device, however, the claim of an active area being surrounded a single trench is not. This limitation REQUIRES a specific disclosure which the originally filed application does not. Through out the prosecution, this Examiner has repeatedly urged the Applicant to direct to any portion of the originally filed specification regarding a single trench. Until now, none was provided. In the Previous Office Action, this Examiner has cited a portion of the sepcification indicated that the active area is clearly surrounded not by one but by two trenches isolation structures. The Applicant has failed to address that issue and also failed to prove that an active area MUST BE, inherently, surrounded by a single trench.
